What is Vitamin D3?

VITAMIN D3: THE IMMUNITY BOOSTER

Vitamin D3 is an essential vitamin that your skin produces in response to sunlight exposure. It is known to support bone health as well as the immune system to protect you from environmental and seasonal threats.

With increased concerns about sun exposure, there has been a surge in Vitamin D3 deficiency, which can affect immune function. The majority of Americans are deficient in Vitamin D and many don't know it! We have a quick and simple Vitamin D test available to determine your levels which can help our providers tailor a Vitamin D supplement protocol for you. Receiving IM injections containing the Vitamin D3 can help you maintain healthy levels to support immune function, bone strength, and overall health.

What are the benefits of taking Vitamin D3?

Boost Immunity: Low levels of Vitamin D3 can affect your cells' ability to defend against environmental threats. Immune cells called "T-cells" encounter a seasonal or environmental threat and immediately extend a receptor for Vitamin D3. If the cells cannot locate the vitamin, it cannot be used to fight the threat. When you have a healthy level of Vitamin D3, the receptors are able to locate the vitamin and provide a strong immune response.

Strengthen Bones: Vitamin D3 is also commonly known for its role in supporting bone health. Calcium, magnesium, and phosphorous all need the vitamin for maximum absorption to optimize both bone density and strength. Vitamin D3 also has a bonus benefit: it helps the body recycle calcium that the kidneys generally excrete to strengthen your teeth.

Improve Heart Health: Healthy Vitamin D3 levels can support arterial health as well as promote normal cholesterol levels, all to ensure optimal blood flow. And since Vitamin D3 is such an effective means of absorption of nutrients for your bones, this prevents calcium from building up in your arteries.

Elevate Your Mood: Everyone has been told that sunshine is an instant mood elevator and that is primarily due to Vitamin D3. When your skin is exposed to the sun, it produces Vitamin D3 which increases your serotonin levels, a hormone directly related to a healthy mood.

IVITAMIN PROPRIETARY IV DRIP BLENDS

- IREHYDRATE - HELPS WITH DEHYDRATION
- IRECOVER - HANGOVER
- IREGENERATE - ATHLETIC PERFORMANCE
- IREDUCE - METABOLISM BOOST
- IREVITALIZE - ANTI-AGING
- IREJUVENATE - JETLAG/FATIGUE
- IREVIVE - MYERS COCKTAIL
- IRENEW - IMMUNITY
- IWANTITALL - EVERYTHING

IVITAMIN IV ELITE

- NAD+ IV OR IM SHOT - FOR ANTI-AGING AND A BRAIN REBOOT
- EXOSOME IV - CELLULAR REPAIR

IVITAMIN BOOSTERS

Vitamin B12, Vitamin C, Zinc, Biotin, Glutathione, Folic Acid, Amino Max Blend, Vitamin D3, CoQ10 and MIC
